ABOUT US

CedarEx Sports Global is a premier exporter of world-class sports balls, backed by over 50 years of manufacturing heritage. We combine traditional craftsmanship with advanced production technology to deliver balls that meet the highest international performance standards.

From FIFA-approved footballs to rugby, handball, volleyball, basketball and specialty balls — every product is manufactured with meticulous precision. Our production capacity of **2.5 million balls per year** ensures we can fulfill orders of any scale with consistent quality and on-time delivery worldwide.

PRODUCTION CAPABILITIES

At CedarEx, **world-class production facilities** enable us to manufacture sports balls meeting the highest standards of quality and efficiency. From raw material processing to final packaging, every step is carefully monitored. Our annual production capacity is **2.5 million balls**, allowing us to serve customers worldwide with consistent quality.

Lamination	Cutting	Printing
Hand Lamination	Laser	Under Glass Digital
Solvent Based	Bridge Cutting Press	Automatic Table
Machine Lamination	Swing Arm Cutting Press	Machine Printing
Hot Melt	Mass Cutting Press	Carousel Printing
Reactive Hot Melt (PUR)		Manual Table Printing
		Manual Individual Panel

TECHNOLOGIES

At CedarEx, we combine craftsmanship and innovation to produce sports balls that meet the highest standards of performance, durability, and design. We can apply **any of these technologies** to create virtually any type of sports ball.

Hand Stitched

Time-honoured method for premium durability and precision — ideal for official match and training balls.

Thermo-Bonded

Seamless surface technology for superior aerodynamics, water resistance and shape retention.

Tritech

Advanced multi-layer construction for maximum control, stability, and responsiveness — elite performance.

Machine Stitched

Consistent stitching for excellent value — ideal for high-volume training and entry-level match balls.

Soft Hybrid

Fusion of hand and machine stitching for balanced performance and comfort in training and match play.

Laminated

Enhanced panel bonding for extra strength, shape stability, and long-term durability in all conditions.

UNDER GLASS DIGITALLY PRINTED BALL

UGD-50146

TPU Film Special Under-glass Digital Printing Technique for balls and many other articles, including bags. The development is solvent free and offers the possibility of vivid and aggressive designing and customization. The ink used is water-base and the adhesives are Solvent Free, making this an Environment Friendly proposition. Some of the advantages of this new invention are: Permanent High Quality Printing · No Peeling/cracking of Printing · Gradient Printing Possibilities · Water Mark Printing · Possibilities of both Hand Stitched and Machine Stitched materials.
